

[Lesson title]

[Course or grade level] | [Estimated time]

Name: _____ Date: _____

Essential question

[Write the question students will investigate.]

Learning goals

- [Describe an observable learning goal.]
- [Add another goal if needed.]

Materials and safety

[List equipment, software, and supplies. Include quantities where helpful.]

[Describe relevant safety precautions and supervision.]

Background

[Introduce the idea in a short paragraph. Define unfamiliar terms before using them.]

Procedure

1. [Describe the setup and first action.]
2. [Describe the measurement or observation. Include units and settings.]
3. [Explain how students should record their results.]

Observations and data

[Rename the columns for this activity. Include units in each measurement heading.]

Trial	[Quantity (unit)]	Observations
1		
2		
3		
4		

Reflection

[Ask students to explain a pattern using evidence from their data.]

[Ask students to identify uncertainty or suggest a follow-up investigation.]

Sources and credits

[Credit authors, figures, data, and adapted materials. Include descriptive links and required license information.]
